

## THE GALLUCCI-CIRIO LIBRARY USING BOOLEAN TO IMPROVE YOUR RESEARCH

Boolean is an effective way to limit and expand your search, which will bring you better results. The terms AND, OR and NOT each bring you a different set of results.

**AND**- brings back results containing ALL ideas. In the example above, only items containing both "woman" AND "man" will be displayed in the results list.

**OR** – will bring back results containing ANY idea. In the example above, items coming back will contain "woman" OR "girl" OR both words.

**NOT** – will eliminate results containing the idea. In the example above, items containing the word "man" will not be in the results. Be careful with this; as you can see from the example above, many results with the word "woman" were also excluded. Those results may be important for your research.
